

# Ramanand Tomar

Full-Stack Developer | Blockchain Engineer | Backend Systems Architect

✉ [ramanandtomar1234@gmail.com](mailto:ramanandtomar1234@gmail.com) — [in LinkedIn](#) — [GitHub](#) — [Portfolio](#)

## TECHNICAL SKILLS

|                             |                                                                                                   |
|-----------------------------|---------------------------------------------------------------------------------------------------|
| <b>Languages:</b>           | JavaScript (ES6+), TypeScript, C++, Python, Rust, SQL, Data Structures & Algorithms               |
| <b>Backend:</b>             | Node.js, Express.js, FastAPI, REST APIs, WebSockets, Microservices, Kafka, RabbitMQ               |
| <b>Frontend:</b>            | React.js, Next.js, React Native (Expo), Vite, Tailwind CSS, HTML5, Redux, Zustand, Context API    |
| <b>Blockchain:</b>          | Ethereum, Solidity, Smart Contracts, Ethers.js, Web3.js, MetaMask, IPFS, Truffle, Ganache, Solana |
| <b>AI &amp; Automation:</b> | Generative AI, Google Gemini API, RAG, MCP Servers, LangChain, n8n Workflow Automation            |
| <b>Databases:</b>           | PostgreSQL, MongoDB, MySQL, SQLite, SQLAlchemy, Drizzle ORM, Database Design                      |
| <b>DevOps:</b>              | Docker, Jenkins, Kubernetes, Prometheus, Grafana, Ansible, Terraform, AWS (EC2, S3)               |
| <b>Tools:</b>               | Git, GitHub, Vercel, Render, Postman, Linux/Unix Command Line                                     |

## EXPERIENCE

### BeyondChats

### Full Stack Developer Intern

*React.js — Node.js — GitLab — CI/CD — Automation Tools( n8n , hermes agent)*

Jan 2026 – June 2026

- Engineered and maintained production-grade chatbot dashboards and embed systems for active client deployments.
- Diagnosed and resolved UI and functional bugs across frontend and backend modules, improving overall system stability.
- Enhanced React.js components and Node.js API integrations to support new dashboard features.
- Streamlined deployments using GitLab CI/CD pipelines and collaborated on code reviews within team workflows.

## PROJECTS

### Testpilot — AI-Powered Testing And Automated QA SaaS Platform

### Full Stack/ CI-CD / AI SaaS

*Next.js 15 — TypeScript — Clerk — Stripe — Gemini AI — Playwright — Browserbase — Neon*

[GitHub](#) | [Live](#)

- Built a full-stack SaaS platform that connects to a user's GitHub repository and uses Google Gemini AI to autonomously generate and run Playwright end-to-end test suites, scheduled cron runs, and CI/CD webhook triggers for GitHub Actions and GitLab CI.
- Engineered cloud-based test execution via Browserbase with full video session replays and AI-driven Root Cause Analysis that classifies failures and explains fixes in plain English.
- Implemented self-healing tests that detect UI/selector drift and automatically regenerate broken scripts, cutting manual test-maintenance effort.

### Imagify AI — Document & Image Processing Suite

### Full Stack / AI

*FastAPI — SQLAlchemy — React Native — PostgreSQL — Celery — Redis — OpenCV — Docker*

[GitHub](#) | [Live](#)

- Built a production-ready document and image processing suite offering PDF merge/split/compress tools alongside classical and AI-powered image enhancement.
- Implemented classical DIP techniques (CLAHE, bilateral denoising, Canny/Sobel edge detection, Wiener filter deblurring, homomorphic illumination normalization) alongside AI-powered 2x/4x super-resolution and low-light enhancement.
- Built a Smart Scanner pipeline with camera-to-PDF auto-cropping and Tesseract OCR.
- Architected asynchronous task processing with Celery and Redis; deployed across Render (API + worker), Neon Postgres, Upstash Redis, and ImageKit.io storage.

### PharmaTrack — Blockchain Pharmaceutical Supply Chain

### Blockchain / Supply Chain

*Solidity — Ethereum (Sepolia) — Ethers.js — React + Vite + TypeScript — Node.js/Express — MongoDB — Socket.io — IPFS*

[GitHub](#) | [Live](#)

- Built an end-to-end pharmaceutical traceability platform on Ethereum (Sepolia testnet), recording every supply-chain stage transition immutably on-chain via a Solidity smart contract.
- Designed six role-based dashboards (Owner, Raw Material Supplier, Manufacturer, Distributor, Retailer, Consumer) with Ethers.js contract integration and QR-code scanning for public product verification.
- Implemented a real-time batch-recall system with Socket.io that instantly alerts every connected dashboard and blocks further stage transitions for recalled items.

### DocuForge MCP Server — AI-Powered Document Generation

### MCP / AI Agent

*TypeScript — Node.js — Express — SQLite — Puppeteer — Gemini API — pnpm Monorepo — Docker*

[GitHub](#)

- Built and published an MCP (Model Context Protocol) server as modular NPM packages, enabling AI agents (Claude, Cursor) to autonomously create, edit, and export IEEE-format research papers.
- Implemented full IEEE two-column formatting with automated BibTeX citation management and inline citation marker resolution.
- Architected a pnpm monorepo spanning a core document/citation engine, a Puppeteer-based PDF compiler, a Gemini-powered AI integration layer, and a remote MCP REST API with HTTP/SSE and token authentication.

## EDUCATION

### Madhav Institute of Technology and Science, Gwalior

July 2023 – June 2027

Bachelor of Technology in Computer Science and Engineering

## ACHIEVEMENTS

- Finalist** — HackOrbit National Level Hackathon 2025 (Top 10% among 500+ teams)
- Finalist** — All India Developers Challenge (AIDC) 2025
- Solved 500+ data structures and algorithms problems on LeetCode and GeeksforGeeks
- Expanding expertise in Solana blockchain development (Anchor framework, Rust)
- Building proficiency in cloud-native DevOps practices (Kubernetes, Terraform, CI/CD)
